

NEW PRODUCT INNOVATION

LANDMARK® NOW OFFERS HUMIDITROL® TECHNOLOGY

LANDMARK®

NEW HUMIDITROL OPTION GIVES YOU AN AFFORDABLE SOLUTION TO HUMIDITY CONTROL.

Known for performance and flexibility, Landmark® rooftop units have been further enhanced by Lennox' patented dehumidification technology—Humiditrol®. This simple humidity-control option delivers an efficient and effective way to remove moisture from the air, making it easy to create a healthier and more comfortable indoor environment.

LANDMARK® PLUS HUMIDITROL® DEHUMIDIFICATION TECHNOLOGY

EFFECTIVE HUMIDITY CONTROL DELIVERS HEALTH AND COMFORT BENEFITS.

The Landmark® rooftop unit lineup now provides affordable and effective humidity control. From increased indoor comfort and improved air quality to additional energy savings, Humiditrol® technology makes your customers' lives more comfortable.

Delivering efficient humidity control

A Landmark rooftop unit with the Humiditrol option has a unique dehumidification-on-demand design that removes moisture based on relative humidity levels—not the temperature. So, it removes moisture with minimal effect on the indoor temperature, avoiding overcooling and excessive energy usage.

Improving air quality

Mold and mildew thrive in damp conditions. Removing excess moisture in the air helps reduce mold and mildew growth, creating a healthier indoor environment and reducing the spread of allergens, which can cause health concerns for allergy sufferers.

Enhancing indoor comfort

Too much moisture can make the air feel sticky and uncomfortable. Humiditrol dehumidification technology works to reduce humidity levels, creating a more comfortable and healthier indoor environment.

Product Availability

Stocked and ready to go, every Lennox Commercial distribution center has Landmark units ready for immediate shipment, thanks to daily restocking.
